TUBULAR HANDLING EQUIPMENT

Texas International

Texas International sources its castings from a certified, API-approved non-domestic facility that has been in continuous operation since 1958. This enduring partnership reflects the company's unwavering commitment to quality and strict adherence to industry standards. By leveraging the extensive expertise and proven capabilities of this long-established facility, Texas International ensures the castings consistently meet the demanding specifications required for critical applications. Additionally, the company performs in-house Magnetic Particle Inspection (MPI) and Load Testing on all newly received equipment, providing an added layer of quality assurance to confirm that products remain free from damage during transit.

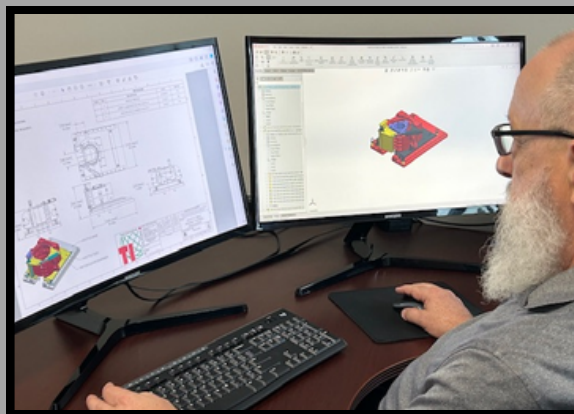

● Load Testing

Texas International Oilfield Tools (TIOT) offers industry-leading load testing capabilities designed to ensure the safety, reliability, and compliance of oilfield handling equipment. Their proof load testing services are calibrated to ASTM E4 standards, accommodating a wide range of equipment

● Strategic Inventory

Texas International Oilfield Tools (TIOT) maintains a robust inventory. By strategically stocking high-demand and specialty products, TIOT is able to respond quickly to market shifts and customer requirements, minimizing downtime and supporting operational continuity.

● Engineering Solutions

Texas International Oilfield Tools custom engineering services are designed to enhance operational efficiency and ensure equipment reliability across diverse applications. TIOT's engineering department specializes in special design requests, providing tailored solutions to meet specific operational needs.

● Magnetic Particle Inspection

Texas International Oilfield Tools (TIOT) offers advanced Magnetic Particle Inspection (MPI) services to ensure the structural integrity and safety of oilfield handling equipment. TIOT conducts inspections in accordance with ASTM standards. Prior to testing, parts are sandblasted to remove surface contaminants, enhancing defect detection. This rigorous approach guarantees that equipment such as casing, drill pipe, and slip-type elevators meet the highest safety and performance standards.
